

MARK SCHEME — Predicted Paper 2A (2026)

Total: 60 marks

Question 1 — Revenue Growth

(a) $94.0 + 13.4 = 107.4$

- B1: Correct answer **107.4 billion**

(b)

- B1: States “CAGR means the revenue increases by the same percentage each year”
- B1: Contextual reference (e.g., “4.5% each year from 2023F to 2026F”)

(c) Any one valid reason:

- B1: e.g., “Market saturation”, “Post-pandemic slowdown”, “Reduced hardware sales”, “Economic uncertainty”

Total: 4 marks

Question 2 — CAGR Players

(a) Use:

$$1.6 = 100(N_0^{1/3} - 1)$$

Steps:

- M1: Rearrangement to find N_0
- M1: Correct substitution and cube root
- A1: $N_0 \approx 866$ million (accept 865–870)

(b)

- B1: States growth is small / slow
- B1: Contextual justification (e.g., “1.6% is low for a global market”)

Total: 5 marks

Question 3 — Graph 1

(a)

$$94.3 - 62.262.2 \times 100 \approx 51\%$$

- M1: Correct method
- A1: 50–52%

(b)

- B1: Any valid reason (e.g., “post-pandemic correction”, “supply shortages”, “delayed releases”)

(c)

- B1: Identifies long-term upward trend
- B1: Notes slowdown after 2021
- B1: Uses graph values to support comment

Total: 6 marks

Question 4 — Revenue Sources

(a)

- B1: e.g., “Consoles have more blockbuster premium releases”

(b) 56% of 40 = **22.4**

- M1: 0.56×40
- A1: 22.4 billion

(c)

- B1: Recurring revenue is predictable / stable
- B1: Helps long-term financial planning / supports ongoing development

Total: 5 marks

Question 5 — Survey Data

(a) 53% of 1200 = **636**

- M1: 0.53×1200
- A1: 636

(b) Premium: 39% of 1200 = 468 Subscription: 9% of 1200 = 108 Difference = **360**

- M1: Both values correct
- A1: 360

(c) Any two valid points:

- B1: Sample may not be representative
- B1: Survey question excluded PAYG / limited options
- B1: Sample size bias / demographic bias (accept any one)

Total: 6 marks

Question 6 — Graph 3

(a)

- B1: Cloud gaming

(b)

- B1: States “steady decline”
- B1: Uses values (e.g., $20 \rightarrow -25$)

(c)

- B1: Downloaded games: moderate growth
- B1: Cloud gaming: rapid growth (with values)

(d) Any valid reason:

- B1: Better internet speeds
- B1: No need for hardware
- B1: Convenience / accessibility

Total: 7 marks

Question 7 — PAYG vs Subscription

(a) Total hours = $12 + 18 + 10 = 40$ Cost = $40 \times 0.40 = \text{\$16.00}$

- M1: Total hours
- A1: \$16

(b) Subscription = \$12 PAYG = \$16 Subscription cheaper by \$4

- M1: Compare costs
- A1: Correct conclusion
- B1: Correct difference

(c)

- B1: Advantage for players (e.g., “only pay for what you use”)

- B1: Disadvantage for developers (e.g., “revenue unpredictable”)

Total: 7 marks

Question 8 — Cloud Gaming CAGR

(a)

$$50 - 2828 \times 100 = 78.6\%$$

- M1: Correct method
- A1: 78–79%

(b)

$$\text{CAGR} = 100(50285 - 1)$$

- M1: Correct substitution
- M1: Correct root
- A1: CAGR $\approx 12.3\%$
- A1: Accept 12–13%

(c)

$$50 \times (1.123)^3 \approx 70.7$$

- M1: Correct use of CAGR
- M1: Correct exponent
- A1: 70–72 billion

(d)

- B1: Any valid assumption (e.g., “growth rate stays constant”)

Total: 10 marks
